WOLF Garden
Lawn Starter Fertiliser

LH 50

WOLF Garden
Lawn Starter Fertiliser

- for a lawn you can use sooner when reseeding, and in the Spring
- with high proportion of phosphorus for stronger root development
- encourages grass to grow densely and green up quickly

APPLICATION:

Spread WOLF Lawn Starter Fertiliser once directly before or after sowing evenly on the prepared surface. The amount to be used is calculated so that the young grass plants can completely satisfy their requirements for nutrition in the first few weeks. In order to go on developing well, after 6 weeks the lawn needs the addition of a special lawn fertiliser, for example WOLF Super Long-term Lawn Fertiliser. Use a wheeled spreader for even spreading and exact dosage.

Amount to be spread:
 spread 25 g/sq. m directly when sowing.

WOLF Spreader setting:
 WE 45/500 = 6.5;
 WE 250/251 = 4 - 4.5
 WE 252 = 4.0, WE 430 = 8

You will find further tips for the care of your lawn on: www.WOLF-Garden.co.uk

For more than 40 years WOLF has conducted intensive lawn and turf research, for professional use as well as for the domestic garden. At the WOLF Research Centre, the largest private one in Europe, high-quality lawn fertilisers and new, particularly efficient varieties of grasses and lawn seed mixtures are tested. We also set the highest standards for the quality of our products - far in excess of the statutory requirements. It is therefore no accident that our products are amongst the best in the world.

Lawn Starter Fertiliser	
EEC FERTILISER	
NPK Fertiliser 18.24.6	
18 % N	Total nitrogen
24 % P ₂ O ₅	Phosphorous pentoxide soluble in neutral ammonium citrate and water (10,5% P)
6 % K ₂ O	Potassium oxide soluble in water (5% K)

50% of the nitrogen is coated for optimised long-term effect and an equal supply of the nutrient to the plants.
 Country of manufacture: USA
Area for application: Special fertiliser for newly sown and reseeded lawns.
Application: spread 25 g/sq.m directly when sowing the lawn seed with a wheeled spreader.
 Filling level technically dependent. Keep in a cool, dry place.

WOLF Garden
Lawn Starter Fertiliser

- for a lawn you can use sooner when reseeding, and in the Spring
- with high proportion of phosphorus for stronger root development
- encourages grass to grow densely and green up quickly

The lawn of your dreams – The result of simple and regular care

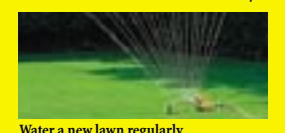

Mow the lawn regularly: ideal height:

Regular scarifying ventilates the lawn and suppresses the formation of moss and weeds

Fertilise the lawn at least 2 - 3 times a year

Water a new lawn regularly

Lawn edges can be tended in a special way

Use special lawn fertilisers for getting rid of moss and weeds

Lawn Starter Fertiliser

- for a lawn you can use sooner when reseeding, and in the Spring
- with high proportion of phosphorus for stronger root development
- encourages grass to grow densely and green up quickly

Fed correctly from the start

The first few weeks after germination are especially important for your new lawn. This is the crucial time for the young grass plants to start growing into a dense, healthy lawn, or to develop only sparsely and with gaps.

WOLF Lawn Starter Fertiliser is therefore specially prepared for the fast, strong initial growth of the young grass plants. The special nutrient combination with the high phosphorus content helps the young plants to form strong roots, and stimulates them to form lateral shoots early. A dense lawn will visibly grow from the first tender vegetation.

A lawn that grows dense faster means a lawn you can use sooner

With WOLF Lawn Starter Fertiliser you will achieve a complete lawn surface 50% faster and more surely, and thus you can use your lawn sooner.

50 sq. m. = 1.25 kg
